```
var q := new queue

coroutine produce
   loop
        while q is not full
            create some new items
            add the items to q
        yield to consume

coroutine consume
   loop
        while q is not empty
            remove some items from q
            use the items
        yield to produce
call produce
```

```
IEnumerator Fade()
{
    Color c = renderer.material.color;
    for (float alpha = 1f; alpha >= 0; alpha -= 0.1f)
    {
        c.a = alpha;
        renderer.material.color = c;
        yield return new WaitForSeconds(.1f);
    }
}
```

State Machine → Coroutines

```
protected virtual IEnumerator Loop()
   while (true)
        if (CurrentState != null && m_CurrentPlayCoroutine == null) //current state is done playing
            if (CurrentState.ValidateLinks(out var nextState))
                if (m_PlayLock)
                   CurrentState.Exit();
                   m PlayLock = false;
                CurrentState.DisableLinks();
                SetCurrentState(nextState);
                CurrentState.EnableLinks();
public bool IsRunning => m LoopCoroutine != null;
```

ScriptableObjects

- Objetos que son instancias de clases que heredan de MonoBehaviour ("MonoBehaviourObjects") son almacenados en memoria y existen solo mientras se juega el juego.
- ScriptableObjects → son almacenados en el disco duro en forma serializada (existen durante y después del juego). Son usados como un contenedor/plantilla para almacenar datos.

    [SerializeField] string m_FeedbackIncorrect;
    [Tooltip("Optional link to the documentation for more information.")]
    0 references
    [SerializeField][Optional] string m_FeedbackLink;
```

Actions

- En clase hemos visto Delegates, events y callbacks. Resumiendo:
 - Delegates en C# son punteros a funciones. Los Delegates nos permiten usar las funciones como parámetros de entrada de otras funciones. Esto nos permite crear Callbacks.
 - En los Callbacks, un evento de sistema dispara una función.
 - En las Actions, el final de una función dispara otra función.
 - Observer Pattern:

Events

```
public class AudioSettingsS0 : DescriptionS0
             // Event subscriptions
             0 references
             private void OnEnable()
                 SettingsEvents.MasterVolumeChanged += SettingsEvents MasterVolumeChanged;
                 SettingsEvents.MusicVolumeChanged += SettingsEvents_MusicVolumeChanged;
                 SettingsEvents.SFXVolumeChanged += SettingsEvents SFXVolumeChanged;
                 // Note: we disable validating the Sound Effects AudioClips here, instead we
84
                 // validate it from the GameplaySounds class
                 // NullRefChecker.Validate(this);
87
             // Event unsubscriptions
             0 references
             private void OnDisable()
                 SettingsEvents.MasterVolumeChanged -= SettingsEvents MasterVolumeChanged;
93
                 SettingsEvents.MusicVolumeChanged -= SettingsEvents MusicVolumeChanged;
94
                 SettingsEvents.SFXVolumeChanged -= SettingsEvents_SFXVolumeChanged;
```

Game events → Actions

```
0 references
         public static class GameEvents
12
              #region Gameplay events
              0 references
              public static Action<int> IndexUpdated;
17
              // Refreshed the current Question with new ScriptableObject data
              0 references
             public static Action<QuestionSO> QuestionUpdated;
21
             // Selected one or more user selected responses
             0 references
              public static Action<List<string>> AnswerSelected;
              // Submitted the selected answer
24
              0 references
              public static Action AnswerSubmitted;
              // Passes feedback for correct/incorrect responses
              0 references
             public static Action<string> CorrectlyAnswered;
28
              0 references
              public static Action<string> IncorrectlyAnswered;
```

Proyecto

Proyecto

- El proyecto se hace individual o en grupos de 2-3 personas.
- Tiene que recoger más o menos todo lo que hemos ido viendo en las prácticas.
- Crearos una cuenta en Github (si no la tenéis ya).
- En el campus virtual hay dos enlaces:
 - 1. PDF con el prototipo en Figma.
 - 2. Fichero de texto con el enlace a github para el proyecto.

Último día presentación → Proyecto y prácticas

| Mayo 2024 | | | | | | |
|-----------|----|----|----|----|----|----|
| 29 | 30 | 1 | 2 | 3 | 4 | 5 |
| 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| 13 | 14 | 15 | 16 | 17 | 18 | 19 |
| 20 | 21 | 22 | 23 | 24 | 25 | 26 |

Examen (si no proyecto)

| Miércoles 29 | 9:00 | 2ºDSI |
|--------------|-------|-----------------|
| | 13:00 | |
| de mayo | 17:00 | CSV |
| Jueves 30 | 9:00 | IW |
